Entity Description:

1. Customer

Stores customer information such as personal details, contact information, and login credentials.

2. Product

Stores product details including name, description, price, stock quantity, category, and supplier.

3. Category

Stores different product categories such as Electronics, Clothing, Home Appliances, etc.

4. Supplier

Stores supplier information including supplier name, contact details, and address.

5. Order

Stores customer order details such as order date, total amount, and order status.

6. Payment

Stores payment information including payment method, amount, payment date, and payment status.

7. Shipment

Stores shipment details including shipment date, delivery date, tracking number, and shipment status.

8. Review

Stores customer ratings and reviews for products.

Summary

The database contains **8 main entities**:

- Customer
- Product
- Category
- Supplier
- Order
- Payment
- Shipment
- Review

Each entity has a unique **Primary Key (PK)** to identify its records and maintain relationships between the database tables.
